# INDUSTRY PATHWAY COMPETITION

## THE PATHWAY BETWEEN JUNIOR AND MAJOR — AND YOU GET TO DESIGN IT.

Robots and intelligent factory automation keep our industry successful tomorrow — and for that we need the creative minds of the future. Industry Pathway is a new RoboCup Competition where your students do exactly that: develop mobile robots for an Industry 4.0 world — and help shape what the competition itself looks like. No prior knowledge needed. We guide you step by step and help you set up a robotics club.

PICK, CARRY, DELIVER

WHERE IT LEADS: ROBOCUP MAJOR

WHO THIS IS FOR

### Schools

**From around year 7** No upper limit — older classes are just as welcome.

### Vocational schools

**Trade & technical schools**
Mechatronics, IT, engineering — bring the shop floor you already know.

### Universities

**Your way in** A fitting entry point if the RoboCup Major League still looks too complex.

**Cooperations are explicitly welcome.** With industry partners — on scenarios and ideas — and between schools and universities. Mixed teams of school students and university students are possible.

### 01 Run a workshop at your school

Get your students around a table for a workshop on Industry 4.0 and mobile robots. We supply a ready-made guide, and we are happy to run it with you. The students answer the open questions: what should this competition look like at RoboCup, and which tasks do they want their robots to solve?

### 02 Turn the ideas into rules

Everything the workshops produce feeds into the first rulebook — and your students stay on board while it takes shape. That way they help build the competition from the very start.

### 03 Try it out at the Consumenta

Nuremberg. A workshop and a test competition where the draft rules meet real robots on a real field for the first time. Bring a team and a robot — together we try out what already works and what can still get better. That is exactly what a test run is for.

**31 Oct – 4 Nov 2026 · Nuremberg**
